

Introduction to Numerical Programming

A Practical Guide for Scientists and Engineers Using Python and C/C++

[HOME](#) [AUTHOR](#) [CONTENTS](#) [LIBRARIES](#) [GRAPHICS](#) [PROGRAMS](#)

Contents

1 Approximate Numbers

- 1.1 Sources of errors in numerical calculations
- 1.2 Absolute and relative errors
- 1.3 Representation of numbers
- 1.4 Significant digits
- 1.5 Errors of elementary operations
 - 1.5.1 Error of a sum
 - 1.5.2 Error of a difference
 - 1.5.3 Error of a product
 - 1.5.4 Error of a quotient
- References

2 Basic Programming Techniques

- 2.1 Programming concepts
- 2.2 Functions and parameters
- 2.3 Passing arguments to Python functions
- 2.4 Passing arguments to C/C++ functions
- 2.5 Arrays in Python
- 2.6 Dynamic array allocation in C/C++
- 2.7 Basic matrix operations
- References

3 Elements of Scientific Graphics

- 3.1 The Tkinter package
- 3.2 The Canvas widget
 - 3.2.1 Commonly used Canvas items
 - 3.2.2 Methods for updating Canvas widgets
- 3.3 Simple Tkinter applications
- 3.4 Plotting functions of one variable
- 3.5 The graphics library `graphlib.py`
 - 3.5.1 Auxiliary functions
 - 3.5.2 Routines for plotting functions
 - 3.5.3 Simple 3D rendering routines
 - 3.5.4 Histograms
- 3.6 Creating plots in C++ using the library `graphlib.py`
- References

4 Sorting and Indexing

- 4.1 Introduction
- 4.2 Bubble sort
- 4.3 Insertion sort
- 4.4 Quicksort
- 4.5 Indexing and ranking
- 4.6 Implementations in C/C++
- 4.7 Problems
- References

5 Evaluation of Functions

- 5.1 Evaluation of polynomials by Horner's scheme
- 5.2 Evaluation of analytic functions
- 5.3 Continued fractions

9 Modeling of Tabulated Functions

- 9.1 Interpolation and regression
- 9.2 Lagrange interpolation polynomial
- 9.3 Neville's interpolation method
- 9.4 Cubic spline interpolation
- 9.5 Linear regression
- 9.6 Multilinear regression models
- 9.7 Nonlinear regression. The Levenberg-Marquardt method
- 9.8 Implementations in C/C++
- 9.9 Problems
- References

10 Integration of Functions

- 10.1 Introduction
- 10.2 Trapezoidal Rule; A Heuristic Approach
- 10.3 The Newton-Cotes Quadrature Formulas
- 10.4 Trapezoidal Rule
- 10.5 Simpson's Rule
- 10.6 Adaptive Quadrature Methods
- 10.7 Romberg's Method
- 10.8 Improper Integrals: Open Formulas
- 10.9 Midpoint Rule
- 10.10 Gaussian Quadratures
- 10.11 Multidimensional integration
- 10.12 Adaptive multidimensional integration
- 10.13 Implementations in C/C++
- 10.14 Problems
- References

11 Monte Carlo Method

- 11.1 Introduction
- 11.2 Integration of functions
- 11.3 Importance sampling
- 11.4 Multidimensional integrals
- 11.5 Generation of random numbers
- 11.6 Implementations in C/C++
- 11.7 Problems
- References

12 Ordinary Differential Equations

- 12.1 Introduction
- 12.2 Taylor series method
- 12.3 Euler's method
- 12.4 Runge-Kutta methods
- 12.5 Adaptive step size control
- 12.6 Methods for second-order ODEs
- 12.7 Numerov's method
- 12.8 Shooting methods for two-point problems
- 12.9 Finite-difference methods for linear two-point problems
- 12.10 Implementations in C/C++
- 12.11 Problems
